👤 PROFILE

Results-driven **Full-Stack Developer** with 5+ years of experience building scalable, high-load web platforms using **React**, **Next.js**, **Node.js**, and **AWS**. Proven track record delivering performant UIs, robust APIs, and scalable backend systems. Skilled in system design, **database optimization**, and integration of complex external services. Passionate about performance, maintainability, and developer experience.

- Lead Developer on [Rowte.io](#) — built **B2B fintech** platform for global education payments from 0 to production **MVP in under 3 months**
- Delivered high-load Telegram MiniApps serving **300k+ concurrent users** using NestJS + gRPC
- Built CMS for AURUS auto brand, **saving 80+ dev hours/month** via admin tools
- Created REST API processing **1M+ req/day** with **sub-200ms latency**
- Integrated 10+ ad systems across multiple high-load frontend/backend stacks
- Led frontend team for "DONOT" project, built modern UI with Vite + React

📁 EMPLOYMENT HISTORY

Senior Full-stack Developer at Interexy, Barcelona (remote)
Feb 2025 — Present

Project 1:

Rowte.io — B2B fintech platform for global education commission payments — multi-currency payouts, per-enrollment reconciliation, automated document verification, and tiered partner management across agencies, sub-agents, and institutions.
[rowte.io](#)

Stack: NestJS, Next.js, TurboRepo, PostgreSQL, RabbitMQ, Redis, TypeScript, Docker, REST API, Better Auth, Refine

Actions:

- Led development as Lead Developer in a 3-person team (junior frontend dev + PM) — took the product from zero to a fully working production MVP in under 3 months
- Built complex B2B financial system with idempotency guarantees, transaction integrity, and real-time monitoring
- Designed and implemented event-driven architecture using RabbitMQ for async commission processing, payouts, and notifications
- Integrated Redis for caching and built a transactional email notification system
- Architected the entire backend infrastructure: database schemas, service boundaries, and CI/CD pipelines
- Deployed production environment to Render — Dockerized frontend, backend, and admin panel as separate services
- Built full-featured internal admin panel using Refine framework for operations and partner management
- Managed junior frontend developer — mentored, assigned tasks, and conducted PR reviews
- Integrated Better Auth with role-based access control (RBAC) and multi-factor authentication (MFA)

Results

- Delivered fully functional production MVP in under 3 months as lead of a 3-person team
- Zero critical financial discrepancies reported post-launch

Russian
English
Armenian
Spanish

- Commission reconciliation time reduced from days to under minutes via automation
- MFA + RBAC integration reduced unauthorized access risk to near zero
- Event-driven architecture handled concurrent payout flows without data loss

Project 2:

Next Street — A platform that helps small businesses connect with capital, services, and support.

nextstreet.com

Stack: React, Redux, TypeScript, NestJS, PostgreSQL, Docker, REST APIs

Actions:

- Rebuilt internal admin panel from scratch using React and Redux, streamlining workflows and improving data visibility
- Integrated CRFUSA platform, enabling seamless data exchange with external partner services
- Refactored and optimized PostgreSQL database structure, redesigning schemas for better performance
- Implemented multiple UI/UX enhancements collaborating with designers
- Refactored 15+ legacy React components, enforcing modern TypeScript patterns

Results:

- Admin panel load time cut by 40%
- 75% reduction in manual data entry — onboarding cut from days to under 6 hours
- Query response times improved by 60% on core reports
- Application submissions increased by 25% following UX updates
- Frontend bundle size reduced by 15%
- 15+ major feature releases with three cross-functional teams

Project 3:

Supplier Success Accelerator (SSA) — B2B SaaS platform helping government agencies, CDFIs, and economic development organizations guide suppliers through structured assessments, personalized goal-setting, and coach-led development. Combines diagnostic questionnaires with AI-driven insights, multi-stakeholder management, and real-time progress tracking

Stack: Next.js, React, TypeScript, Hono, oRPC, TurboRepo, Prisma, PostgreSQL (AWS RDS Aurora Serverless v2), SST v3 (Infrastructure as Code), Redis, Better Auth, AdminJS, TanStack Query, Tailwind CSS, shadcn UI, Calendly integration, Mailchimp, Zendesk, SCORM

Actions:

- Served as Full-Stack Developer in a 7-person team (4 engineers, 1 PM, 2 product managers) — owned end-to-end integration architecture and delivery
- Architected and implemented all third-party integrations as complete full-stack solutions:
 - **Zendesk:** Built widget component with real-time support chat embed, authentication bridging, and event logging
 - **Calendly:** Integrated appointment scheduling system with webhook handling, sync polling, and calendar event reconciliation
 - **Mailchimp:** Connected audience sync, segmentation, and email campaign automation tied to supplier lifecycle events
 - **Amplitude:** Instrumented comprehensive analytics tracking across user journeys, feature adoption, and conversion funnels
- Designed and deployed event-driven architecture for real-time platform notifications and third-party data synchronization using webhooks and polling strategies
- Built robust integration monitoring and error recovery — ensured data consistency across external systems with retry logic and transaction integrity

- Implemented role-based access control (RBAC) with multi-organization scoping across all platform layers
- Mentored junior engineers on full-stack integration patterns and API design best practices

Results:

- Delivered 5+ critical third-party integrations on schedule — zero integration-related production incidents post-launch
- Eliminated manual support workflows through Zendesk integration — support response time reduced by 70%
- Automated supplier email engagement via Mailchimp — increased campaign engagement rate to 45% through behavioral segmentation
- Real-time analytics via Amplitude revealed product bottlenecks — insights led to 3 major UX improvements with 25% increase in feature adoption
- Event-driven architecture scaled to handle 10,000+ daily supplier actions without data loss or duplicate processing
- Maintained 99.5% uptime across all integrated services through proactive monitoring and graceful error handling

Senior Full-stack Developer (contract) at OkVPN, Barcelona (remote)

Mar 2024 — Feb 2025

Project:

OkVPN — Scalable VPN subscription platform offering secure access and automated user management.

Stack: React, Redux, TypeScript, NestJS, PostgreSQL, gRPC, RabbitMQ, Redis, RabbitMQ, Sentry, Docker, Git, CI/CD

Actions:

- Led migration from monorepo to gRPC + RabbitMQ-based microservice architecture
- Designed scalable microservices architecture
- Developed full referral payout system
- Built user-facing dashboard for VPN subscription management
- Integrated Redis for session caching and async job handling
- Implemented Sentry across services with structured logging and alerting

Results:

- Downtime reduced by 70%
- Response times improved by 50%
- Referral system increased subscriptions by 12% in first 3 months
- 40% drop in support requests related to subscription/billing
- Time-to-detect critical issues reduced by ~60%
- Core features delivered ahead of roadmap with a team of 5

Middle + FullStack Developer at RedNeck Studio, Remote

Aug 2024 — Jan 2025

Stack: NestJS, gRPC, Refine, Vite, React

- Supported **10+ high-load** Telegram MiniApps (**3M+ users**)
- Developed admin panels using **Refine + gRPC + NestJS** to replace pgAdmin for game designers
- Integrated **10+** ad platforms across backend (**C#/NestJS**) and frontend (**React**)
- Built **gRPC** file upload streaming for **multi-GB** file transfers
- **Led frontend** for "DONT" project; delivered modern, responsive UI using Vite + React

Backend Architect and Developer at Kodix Agency, Remote

May 2024 — Aug 2024

Project:

AURUS — Customizable CMS for the AURUS auto brand.
aurusmotors.com

Stack: NestJS, TypeScript, TypeORM, PostgreSQL

- **CMS Development:** Created a highly customizable CMS for the major automotive manufacturer AURUS, enabling the elimination of manual JSON file editing.
- **Backend Architecture:** Designed and implemented the architecture based on NestJS, TypeScript, and TypeORM.
- **Database Design:** Developed an optimized PostgreSQL database structure to handle complex data.
- **Integrations:** Implemented integrations with third-party services, including email distribution.
- **Working with JSON:** Automated the parsing and editing of large JSON configurations (over 5,000 lines).
- **Result:** Accelerated the AURUS team's workflows by creating a convenient and efficient platform for managing configurations.

Full stack developer at CROSSNETICS, Remote

Dec 2022 — May 2024

- Developed a comprehensive marketing web platform utilizing advanced **AI algorithms** and **web3** technologies.
- Implemented **automated** project **documentation** and **typization** via tools like swagger for both **backend** and **frontend** that **significantly boosted** development process.
- Developed a **RESTful API** that handled over **1 million requests per day** with response times **under 200 millisecond**.
- Utilized a diverse tech stack including **NestJS, Next.js, TypeScript, MySQL, Redis and ElasticSearch**.
- Implemented a **microservices architecture** that improved system **modularity** and **reduced dependencies** between components.
- **Optimized** database **queries** to improve application performance and **reduce response times by 10-25%**.

CRM Full-Stack Developer (contract) at FaceStellar, Remote

Sept 2022 — Dec 2022

Stack: Node.js, Express, React

- Built CRM system with Node.js + Express and React
- Improved customer service efficiency by 30%
- Created CI/CD pipeline

PHP Backend Developer at Highway Logistic Group, Moscow

Feb 2022 — Sept 2022

Stack: PHP, MySQL

- Maintained and optimized MySQL databases
- Expanded CRM system
- Debugged critical components (reliability +15%)
- Migrated PHP 5 '7.4 (performance +40%)
- Delivered urgent features improving satisfaction by 50%

EDUCATION

Bachelor , Double degree LSE & HSE, Moscow/London

Sept 2019 — Jul 2023

Data Scientist Bachelor program.

London School of Economics and Political Science:

Combines data science, machine learning, statistics and mathematics. The programme

uses a rigorous approach, has a mathematical focus and involves applying data science to the social sciences.

Higher School of Economics:

The aim of this programme is to train analysts and data scientists who are experienced in modern methods of machine learning, software development, working with big data and developing analytical models for business. The programme is based on the successful experience of HSE University's Bachelor's programme in Applied Mathematics and Informatics and the longstanding work of the London School of Economics and Political Science (University of London).

School 13 with deep learning English course, Vladivostok

Sept 2008 — Jun 2019
