PROFILE

Results-driven Full-Stack Developer with **3+ years of experience** building scalable, high-load web platforms using **React, Next.js, Node.js**, and **NestJS**. Proven track record delivering performant UIs, robust APIs, and scalable backend systems. Skilled in system design, database optimization, and integration of complex external services. Passionate about performance, maintainability, and developer experience.

TECH HIGHLIGHTS

- Delivered high-load Telegram MiniApps serving **3M+ users** using NestJS + gRPC
- Built CMS for AURUS auto brand, saving **80+ dev hours/month** via admin tools
- Created REST API processing **1M+ req/day** with sub-200ms latency
- Integrated 10+ ad systems across multiple high-load frontend/backend stacks
- Led frontend team for "DONOT" project, built modern UI with Vite + React

TECH STACK

Frontend: React, Next.js, Vite, Webpack, SCSS, TypeScript
Backend: Node.js, NestJS, Express, C#/.NET, gRPC, TypeORM
Databases: PostgreSQL, MySQL, ClickHouse, Redis, MongoDB, ElasticSearch
DevOps: Docker, CI/CD, Git, Linux
Others: Swagger, REST API, JSON API, Web3, AI Algorithms

EMPLOYMENT HISTORY

Senior Full-stack Developer at Interexy, Barcelona (remote)
February 2025 — Present

Project: Next Street – A platform that helps small businesses connect with capital, services, and support.

Technological Stack:

- Frontend: React, Redux, TypeScript
- Backend: NestJS, PostgreSQL
- Tools & Infrastructure: Docker, Git, REST APIs

Responsibilities & Achievements

Situation & Task

At Interexy, I was responsible for building and maintaining the core infrastructure of Next Street, including the admin panel, platform integrations, and overall system performance, with the goal of improving efficiency and user engagement.

Action

Rebuilt the internal admin panel from scratch using React and Redux, streamlining workflows and improving data visibility.

Integrated the CRFUSA platform, enabling seamless data exchange with external partner services to automate key business processes.

Refactored and optimized database structure in PostgreSQL, redesigning schemas and relationships for better performance and scalability.

Implemented multiple UI/UX enhancements, collaborating with designers to improve application flows and responsiveness.

Armenian

Spanish

• HOBBIES •

Snowboarding, surfing,
motocross, gaming,
skateboarding, music, bass guitar

Refactored over 15 legacy React components, enforcing modern TypeScript patterns and reducing technical debt.

Results

Admin panel **load time cut by 40%**, increasing productivity across the operations team.

75% reduction in manual data entry, by automating CRFUSA data imports—cutting onboarding times from days to under 6 hours.

Query response times **improved by 60%** on core reports and dashboards, enabling faster decision-making.

Application submissions **increased by 25%**, based on A/B testing following UX updates.

Frontend bundle **size reduced by 15%**, speeding up load times and improving application maintainability.

Delivered over **15 major feature releases** in collaboration with three cross-functional teams, enhancing platform stability and user experience.

Senior Full-stack Developer (part-time/contract) at OkVPN, Barcelona (remote)

January 2025 — Present

Project: OkVPN – Scalable VPN subscription platform offering secure access and automated user management.

Tech Stack:

- Frontend: React, Redux, TypeScript
- Backend: NestJS, PostgreSQL, gRPC, RabbitMQ
- Caching & Messaging: Redis, RabbitMQ
- Monitoring & Tooling: Sentry, Docker, Git, CI/CD

Responsibilities & Achievements

Situation & Task

OkVPN was transitioning from a tightly coupled monolith to a scalable, fault-tolerant system. I was responsible for leading key parts of that migration, while also delivering high-impact features and improving observability.

Action

Led the migration from monorepo to a gRPC + RabbitMQ-based microservice architecture, establishing clear service boundaries, communication protocols, and deployment strategies.

Designed and implemented the architecture for scalable microservices, focusing on maintainability, fault isolation, and performance under load.

Developed the full referral payout system, handling referral tracking, dynamic payout logic, and automated financial workflows.

Built a user-facing dashboard that allows management of VPN subscriptions, auto-renewal, payment methods, and session visibility.

Integrated Redis for session caching and async job handling, improving backend throughput and responsiveness.

Implemented Sentry across services, setting up structured logging, error tracking, and alerting pipelines—greatly improving debugging speed and visibility across environments.

Results

Downtime reduced by 70%, thanks to microservice isolation and more resilient deployments.

Response times improved by **50%**, by decoupling high-load ops into message queues and using Redis effectively.

Referral system led to a **12% increase** in new user subscriptions in the first 3 months.

40% drop in support requests related to subscription and billing after launching the new user panel.

Sentry logging reduced time-to-detect critical issues by ~60%, improving response time and developer workflow.

Delivered core features ahead of roadmap with a tight team of 5 engineers, acting as one of the lead developers on backend services.

• **Middle + FullStack Developer at RedNeck Studio, Remote**

August 2024 — January 2025

- Supported **10+ high-load** Telegram MiniApps (**3M+ users**)
- Developed admin panels using **Refine + gRPC + NestJS** to replace pgAdmin for game designers
- Integrated **10+** ad platforms across backend (**C#/NestJS**) and frontend (**React**)
- Built **gRPC** file upload streaming for **multi-GB** file transfers
- **Led frontend** for "DONT" project; delivered modern, responsive UI using Vite + React

• **Backend Architect and Developer at Kodix Agency, Remote**

May 2024 — August 2024

Project AURUS

- **CMS Development:** Created a highly customizable CMS for the major automotive manufacturer AURUS, enabling the elimination of manual JSON file editing.
- **Backend Architecture:** Designed and implemented the architecture based on NestJS, TypeScript, and TypeORM.
- **Database Design:** Developed an optimized PostgreSQL database structure to handle complex data.
- **Integrations:** Implemented integrations with third-party services, including email distribution.
- **Working with JSON:** Automated the parsing and editing of large JSON configurations (over 5,000 lines).
- **Result:** Accelerated the AURUS team's workflows by creating a convenient and efficient platform for managing configurations.

• **Full stack developer at CROSSNETICS, Remote**

December 2022 — May 2024

- Developed a comprehensive marketing web platform utilizing advanced **AI algorithms** and **web3** technologies.
- Implemented **automated project documentation** and **typization** via tools like swagger for both **backend** and **frontend** that **significantly boosted** development process.
- Developed a **RESTful API** that handled over **1 million requests per day** with response times **under 200 millisecond**.
- Utilized a diverse tech stack including **NestJS, Next.js, TypeScript, MySQL, Redis and ElasticSearch**.
- Implemented a **microservices architecture** that improved system **modularity** and **reduced dependencies** between components.
- **Optimized database queries** to improve application performance and **reduce response times by 10-25%**.

• **CRM full stack developer at FaceStellar, Remote (contract)**

September 2022 — December 2022

One of the lead developers of *Customer Relationship Management* system for FaceStellar beauty saloon.

- Developed complex CRM system from the ground up leveraging **Node.js + Express** and **React** that **improved** customer service efficiency by **30%**.
- Created a Continuous Integration/Continuous Deployment (CI/CD) pipeline that allowed easy deployment process

PHP back end developer at Highway logistic group , Moscow

February 2022 — September 2022

- Oversaw the **maintenance** and **optimization** of **MySQL** databases, ensuring data integrity and **performance enhancements**, contributing to a more robust and reliable data management system.
- Developed and integrated new sections within the company's **relational database** architecture, leading to enhanced data organization and accessibility.
- **Played a key role** in the expansion and enhancement of the company's CRM system by implementing **advanced features, complex classes, and controllers**, resulting in a more dynamic and user-friendly platform.
- **Led the debugging** efforts for critical software components, identifying and resolving numerous issues, which **increased system reliability by 15%** and reduced downtime.
- **Managed a migration** of the company's software stack from **PHP version 5 to 7.4**, ensuring compatibility and leveraging new features for a **40% improvement** in system **performance**.
- Worked closely with front-end developers to **architect** and **build** new **system sections** from scratch, enhancing the user experience and interface functionality.
- Responded to high-priority development needs, efficiently delivering urgent front-end and back-end features that **improved overall system responsiveness and user satisfaction by 50%**.

EDUCATION

Bachelor , London School of economics & Higher School of Economics, Moscow/London

September 2019 — July 2023

Double degree Data Scientist Bachelor program.

London School of Economics and Political Science:

Combines data science, machine learning, statistics and mathematics. The programme uses a rigorous approach, has a mathematical focus and involves applying data science to the social sciences.

Higher School of Economics:

The aim of this programme is to train analysts and data scientists who are experienced in modern methods of machine learning, software development, working with big data and developing analytical models for business. The programme is based on the successful experience of HSE University's Bachelor's programme in Applied Mathematics and Informatics and the longstanding work of the London School of Economics and Political Science (University of London).

School 13 with deep learning English course, Vladivostok

September 2008 — June 2019

COURSES

Game Programming and algorithms with C++, ID Coding & Engineering Academy(Imperial College London)

July 2018 — August 2018

Demonstrated Proficiency:

- Animating sprites
- Creating console-based games
- Identifying and fixing bugs

- Making custom art assets
- Using object oriented programming
- Creating adaptable game objects
- Re-creating classic games
- Implementing simple AI
- Understanding program structure

Oxford summer English for 13-15 years, Oxford Royale Academy

August 2016

CEF Level: B2

Has achieved EF EPIs score:

84%(equivalent to C1 on CEFR scale)
