PROFILE

Results-driven Full-Stack Developer with 6+ years of experience building scalable, high-load web platforms using Go, Node.js, React, Next.js, and AWS. Proven track record delivering performant UIs, robust APIs, and scalable backend systems. Skilled in system design, database optimization, fault-tolerant architecture, and integration of complex external services.

- Lead Developer on Rowte.io: built a B2B fintech platform for global education payments from 0 to production MVP in under 3 months, including backend services built with Go
- Designed and delivered fault-tolerant, horizontally scalable backend systems for high-load Telegram MiniApps using NestJS + gRPC
- Built CMS for AURUS auto brand, saving 80+ dev hours/month through internal admin tooling
- Built and optimized backend APIs handling 20K+ RPS under peak load, with a focus on low latency, resilience, and graceful degradation
- Integrated 10+ ad systems across multiple high-load frontend and backend stacks
- Led frontend team of 5 engineers, building a modern UI with Vite + React

EMPLOYMENT HISTORY

Senior Full-stack Developer at Interexy, Barcelona (remote)

Feb 2025 — Present

Rowte.io

Lead Full-Stack Developer

B2B fintech platform for global education commission payments, supporting multi-currency payouts, enrollment-level reconciliation, automated document verification, and partner hierarchy management.

Tech: Go, Next.js, TypeScript, PostgreSQL, RabbitMQ, Redis, Docker, TurboRepo, REST API, Better Auth, Refine

- Led development of a production MVP from scratch in under 3 months with a 3-person team, owning Go backend architecture, delivery planning, and code quality.
- Designed and implemented a transaction-safe commission and payout system in Go with idempotency guarantees, reducing reconciliation from days to minutes.
- Built event-driven workflows with Go and RabbitMQ for asynchronous commission processing, payouts, notifications, and background financial operations.
- Architected PostgreSQL schemas, service boundaries, and CI/CD pipelines for a fault-tolerant, multi-service production deployment.
- Implemented secure authentication and authorization flows with RBAC and MFA across agencies, sub-agents, institutions, and internal operations.
- Built an internal admin platform with Refine for partner management, reconciliation, document review, and operational monitoring.

NextStreet

Full-Stack Developer

Platform helping small businesses access capital, services, and business support through internal tools, partner integrations, and high-volume data processing workflows.

Tech: React, Redux, TypeScript, NestJS, Go, PostgreSQL, Docker, REST API

- Rebuilt the internal admin panel from scratch using React, Redux, and TypeScript, improving workflow speed and data visibility for operations teams.

Unix OS

LANGUAGES

Russian

English

Armenian

Spanish

- Developed a hybrid NestJS + Go backend architecture, using NestJS for I/O-heavy APIs, integrations, and orchestration, and Go for compute-intensive and high-throughput workloads.
- Built Go services for concurrent data processing, complex calculations, and high-load analytics pipelines, improving throughput and isolating CPU-intensive workloads from core API services.
- Integrated the CRFUSA partner platform and automated data exchange workflows, reducing manual onboarding work.
- Refactored PostgreSQL schemas and optimized core reporting queries, improving query response times by 60%.
- Modernized 15+ legacy React components with stronger TypeScript patterns and improved maintainability.
- Delivered UI/UX improvements in collaboration with designers, contributing to a 25% increase in application submissions.
- Shipped 15+ major features across three cross-functional teams while reducing admin load time by 40% and bundle size by 15%.

Supplier Success Accelerator

Full-Stack Developer

B2B SaaS platform helping government agencies, CDFIs, and economic development organizations guide suppliers through assessments, goal-setting, coaching, and progress tracking.

Tech: Next.js, TypeScript, Hono, oRPC, Prisma, PostgreSQL, AWS RDS Aurora Serverless v2, SST v3, Redis, Better Auth, AdminJS, TanStack Query, Tailwind CSS, shadcn/ui

- Owned end-to-end integration architecture for a 7-person product team, delivering third-party integrations across support, scheduling, marketing, analytics, and learning workflows.
- Built Zendesk integration with embedded support chat, authentication bridging, event logging, and workflow automation, reducing support response time by 70%.
- Integrated Calendly with webhook handling, sync polling, and event reconciliation to automate scheduling workflows.
- Connected Mailchimp audience sync, segmentation, and lifecycle-based campaign automation, increasing campaign engagement to 45%.
- Implemented Amplitude analytics tracking across user journeys, conversion funnels, and feature adoption, helping identify bottlenecks that led to a 25% adoption lift.
- Designed integration monitoring, retries, and recovery flows to maintain data consistency across external services with zero integration-related production incidents.

Senior Full-stack Developer (contract) at OkVPN, Barcelona (remote)

Mar 2024 — Feb 2025

Scalable VPN subscription platform providing secure access, automated user management, subscription billing workflows, and referral-based growth.

Tech: React, Redux, TypeScript, NestJS, PostgreSQL, gRPC, RabbitMQ, Redis, Sentry, Docker, CI/CD

- Led migration from a monolithic/monorepo architecture to a gRPC and RabbitMQ-based microservice system, improving scalability and service isolation.
- Designed and implemented core microservices for subscription management, user access, referral payouts, and background processing.
- Built a user-facing dashboard for VPN subscription management, reducing subscription and billing-related support requests by 40%.
- Developed a referral payout system that contributed to a 12% increase in subscriptions within the first 3 months.
- Integrated Redis for session caching and async job coordination, improving response times by 50%.
- Implemented Sentry, structured logging, and alerting across services, reducing time-to-detect critical issues by approximately 60%.

- Improved platform reliability through service decoupling and deployment pipeline updates, reducing downtime by 70%.

Middle + FullStack Developer at RedNeck Studio, Remote

Aug 2024 — Jan 2025

Tech: NestJS, gRPC, Refine, Vite, React

- Supported 10+ fault-tolerant, high-load Telegram MiniApps handling 20K+ RPS (3M+ users)
- Developed admin panels using Refine + gRPC + NestJS to replace pgAdmin for game designers
- Integrated 10+ ad platforms across backend (C#/NestJS) and frontend (React)
- Built gRPC file upload streaming for multi-GB file transfers
- Led a frontend team of 5 engineers on the "DONT" project; delivered a modern, responsive UI using Vite + React

Backend Architect and Developer at Kodix Agency, Remote

May 2024 — Aug 2024

AURUS — Customizable CMS for the AURUS auto brand.

aurusmotors.com

Tech: NestJS, TypeScript, TypeORM, PostgreSQL

- CMS Development: Created a highly customizable CMS for the major automotive manufacturer AURUS, enabling the elimination of manual JSON file editing.
- Backend Architecture: Designed and implemented the architecture based on NestJS, TypeScript, and TypeORM.
- Database Design: Developed an optimized PostgreSQL database structure to handle complex data.
- Integrations: Implemented integrations with third-party services, including email distribution.
- Working with JSON: Automated the parsing and editing of large JSON configurations (over 5,000 lines).
- Result: Accelerated the AURUS team's workflows by creating a convenient and efficient platform for managing configurations.

Full stack developer at CROSSNETICS, Remote

Dec 2022 — May 2024

Tech: NestJS, Next.js, TypeScript, MySQL, Redis, ElasticSearch

- Developed a comprehensive marketing web platform utilizing advanced AI algorithms and web3 technologies.
- Implemented automated project documentation and typization via tools like swagger for both backend and frontend that significantly boosted development process.
- Built and optimized fault-tolerant REST APIs handling over 1 million requests per day with response times under 200 milliseconds.
- Implemented a microservices architecture that improved system modularity and reduced dependencies between components.
- Optimized database queries to improve application performance and reduce response times by 10-25%.

CRM Full-Stack Developer (contract) at FaceStellar, Remote

Sept 2022 — Dec 2022

Tech: Node.js, Express, React

- Built CRM system with Node.js + Express and React
- Improved customer service efficiency by 30%
- Created CI/CD pipeline

PHP Backend Developer at Highway Logistic Group, Moscow

Feb 2022 — Sept 2022

Tech: PHP, MySQL

- Maintained and optimized MySQL databases
- Expanded CRM system
- Debugged critical components (reliability +15%)
- Migrated PHP 5 → 7.4 (performance +40%)
- Delivered urgent features improving satisfaction by 50%

EDUCATION

Bachelor , Double degree LSE & HSE, Moscow/London

Sept 2019 — Jul 2023

Data Scientist Bachelor program.

London School of Economics and Political Science:

Combines data science, machine learning, statistics and mathematics. The programme uses a rigorous approach, has a mathematical focus and involves applying data science to the social sciences.

Higher School of Economics:

The aim of this programme is to train analysts and data scientists who are experienced in modern methods of machine learning, software development, working with big data and developing analytical models for business. The programme is based on the successful experience of HSE University's Bachelor's programme in Applied Mathematics and Informatics and the longstanding work of the London School of Economics and Political Science (University of London).

School 13 with deep learning English course, Vladivostok

Sept 2008 — Jun 2019
